WIDE FLUTED

PRODUCT DATA

Species & Finishes

Great for residential and small commercial projects, our Wide Fluted is made from 100% solid wood in white oak, walnut, ash, and paint grade poplar. Planks are available unfinished or prefinished.

Fire Rating

All finishes are Class A fire rated.

Site Conditions

For most installations, we recommend a climatic temperature within 55 to 75 degrees Fahrenheit and 30% to 50% humidity level. Environments that do not meet these criteria will cause wood to experience shrinking and swelling issues that damage the product. We cannot guarantee our products' performance in such environments.

Installation

UE recommends screwing 2" furring strips to the wall in 24" intervals. Using a sustainable construction adhesive, secure the planks to the strips. Use 18 gauge, 1 ½" brad nails to secure the boards around the perimeter and center where extra stability is needed. If installing trim to cover the edges, use nails to secure the trim directly to the planks.

Shipping

Orders may ship in UPS boxes or LTL on pallets based on the most cost-effective option. Shipping costs may vary.

LEED

Urban Evolutions Solid Wood Wall Planks may contribute toward satisfying the following credits under LEED® v4.1:

- M&R – Sourcing of Raw Materials – Declare Label
- IEQ – Low-Emitting Materials – Inherently Non-Emitting Sources

Sustainability

Our standard finish offerings are free of Red List chemicals. Documentation is available on request. Wood is sourced from domestic forests, responsibly managed Midwest forests, and fallen city trees.
