

CHARACTER GRADE WHITE OAK CLADDING

Our character grade white oak is one of our favorite cladding options. The tanins in white oak produce a warm, nutty tone that take beautifully to a variety of finishes. The nicely varied grain pattern is highlighted by occasional character marks such as a small knot or burl, adding richness and interest to your floor.

Shown here in finished in clear matte, this product is available unfinished or prefinished. Class A fire treatment is available.

CLADDING CONSIDERATIONS

CHARACTER/GRADE CHARACTER/GRADE Solid wood cladding is an organic material and as such natural variations in grain and colors patterns should be expected. Prefinished cladding will have small open knots and non-structural checks filled with epoxy. We do not fill small knots and checks and recommend applying cladding to a darkened surface.

INSTALLATION Prior to placing your order and installing our product, please visit <https://urbanevolutions.com/cladding-considerations/> for more information.

CARE Please [contact your Urban Evolutions Sales Representative](#).
