

OUR COMMITMENT TO SUSTAINABILITY

LEED

The U.S. Green Building Council's LEED® green building program is the world's most widely used green building program and was created as a leadership standard defining best practices for healthy, high-performing green buildings. Urban Evolutions' products may contribute toward satisfying a variety of credits under LEED®. Applying the available materials to environmental certification programs is the responsibility of the architect.

Relevant categories include:

- M&R – Material Ingredients
- M&R – Sourcing of Raw Materials
- IEQ – Low-Emitting Materials

DECLARE & RED LIST

Our Live Sawn Veneer Panels and Slat Wood Wall Panels, in standard finishes, are approved for the Living Building Challenge Red List. Our Solid Urban & Reclaimed Wood products are completely free from Red List chemicals. View our ingredient disclosures on the Declare database [here](#).

HEALTHY FINISHES

We collaborate closely with our finish manufacturing partners to create no-VOC and low-VOC formulas, eliminating Red List chemicals and formaldehyde. Many of our standard finishes are Certified Clean Air Gold by Intertek Sustainability.

SOURCING

Based in the Midwest, we draw inspiration from our surrounding hardwood forests. We source many products from reclaimed and urban wood, while also prioritizing under-utilized species and lumber grown through responsible management practices. FSC® certified materials are available upon request.

TAKEBACK REUSE PROGRAM

Our engineered slat and veneer wood wall panels are designed with circularity in mind. Through our extensive network of reuse centers across the country, our Takeback Reuse Program ensures our panels can be rehomed at the end-of-life stage, preventing landfill waste and supporting the circular economy.
