

SOLID WIDE FLUTE SLAT WOOD WALL PLANKS

PRODUCT DATA

Species & Finishes

Great for residential and small commercial projects, our Wide Flute Slat Wood Wall Planks are made from 100% solid wood. This product is available in basswood, white oak, poplar, walnut and urban ash. All wood wall planks are available unfinished or prefinished in matte clear and are made in the USA. Total weight approximately 1.75-2lbs per square foot.

Fire Rating

All finishes are Class A fire rated.

Additional Options

Trim and corner pieces available for an additional charge.

Site Conditions

For most installations, we recommend a climatic temperature within 55 to 75 degrees Fahrenheit and 30% to 50% humidity level. Environments that do not meet these criteria will cause wood to experience shrinking and swelling issues that damage the product. We cannot guarantee our product's performance in such environments.

Installation

UE recommends screwing 2" furring strips to the wall in 24" intervals. Using a sustainable construction adhesive, secure planks to strips. Use 18 gauge, 1^{1/2}" brad nails to secure the boards around the perimeter and center where extra stability is needed. If installing optional trim to cover the edges, use nails to secure the trim directly to the planks.

Shipping

Orders may ship UPS in boxes or LTL on pallets based on the most cost-effective option. Shipping costs may vary.

LEED

Urban Evolutions veneer panels may contribute toward satisfying the following credits under LEED® v4.1:

M&R – Sourcing of Raw Materials – Declare Label

IEQ – Low Emitting Materials – Inherently Non-Emitting Sources

Sustainability

Our standard finish offerings are free of Red List chemicals. Documentation is available on request. Wood is sourced from domestic, sustainably managed forests in the Midwest and fallen city trees.

PRODUCT SPECIFICATIONS

PLANK WIDTHS	3"
SLAT DIMENSIONS	Overall thickness of plank: 1" Flute depth: 1/2"
PLANK HEIGHT	8'
MINIMUM	100 sf
FINISH	Unfinished or prefinished in matte clear
